NOTICE:

*The seat heater can only be inspected through other items listed in the suspected area of the problem symptoms table (see page 72-31). If normal operations of these items are confirmed, the seat heater may be malfunctioning.

HINT:

The seat heater system is part of the large-scale multiplex communication system. This system features shared communication wiring that reduces the wiring complexity of the communication lines. The first step in any repair is to confirm the proper operation of the communication system. Proceed with troubleshooting after the communication has been verified (see the multiplex communication system).
