

## FAIL-SAFE CHART

### 1. FRONT WIPER SYSTEM

- (a) When the wiper switch is in any position other than "OFF" and the blades have been frozen, a malfunction is detected by the passenger side junction block and the wiper operation is stopped.

HINT:

Recovery condition: Ignition switch off.

- (b) When the rain sensor is broken and the wiper switch is in the AUTO position, change the front wiper system to the intermittent mode.

HINT:

Recovery condition: Signal level error cancellation from rain sensor.

- (c) When the rain sensor overheats and the front wiper is in the HI operation mode, change the front wiper system to the LO operation mode.

HINT:

Recovery condition: Ignition switch off or wiper operation signal is except INT and LO.

- (d) When the passenger side J/B ECU malfunctions, the front wiper system is in the HI operation mode by combination switch only.

HINT:

Recovery condition: Passenger side J/B ECU returns to normal.
